

Thank you for purchasing the MPC60 Vol 3. This is the last in the MPC60 series of sample packs. It includes: Layered Drums, Vinyl Drums, Various Drum Machines, FX and even some synth sounds.... all sampled on the MPC60. Then captured as 24 bit wav files. These are some seriously solid samples dripping with the 60's legendary sonic character. The following pages include some useful info and some photos of the gear used to make this product.

Features:

Guru version contains:

12 x Bundles

20 x Kits

1053 x 24 bit wav samples

Battery version contains:

18 x Kits

1053 x 24 bit wav samples

Refill versions contains:

12 x Combinators

16 x ReDrum Kits

4 x NNXT Patches

1053 x 24 bit wav samples

iDrum versions contains:

17 x Kits

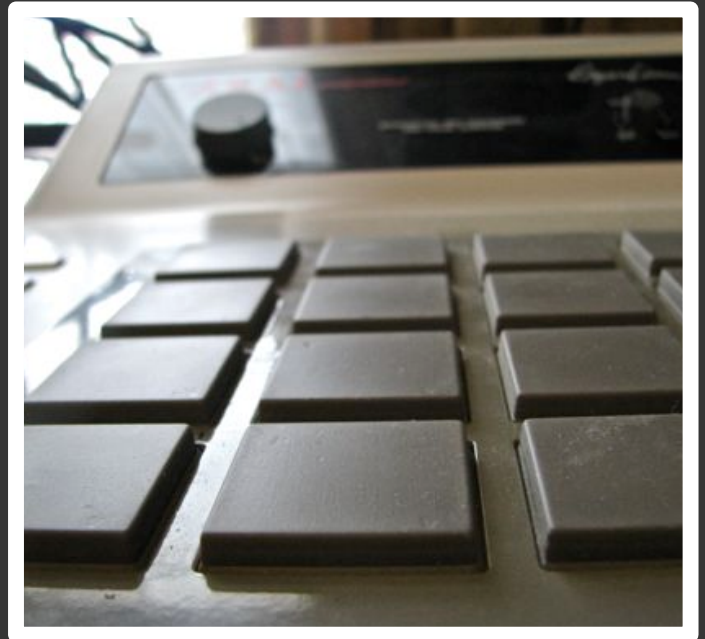

1053 x 24 bit wav samples

Wav Pack contains:

1053 x 24 bit wav samples

Note:

Not all the samples were used to make the kits in Guru, Reason, Battery and iDrum... so there are plenty of other sounds for you to customise those kits or even create your own.

The MPC60 is a 16 voice polyphonic, 12-bit, 40 kHz, drum sampler. Designed by Roger Linn for Akai. It was first produced in 1988 and retailed for about \$5000 usd. This drum machine has earned legendary status as a beat making tool. It's sound is often described as punchy and warm... and it's swing quantise is incredibly funky and much loved by Hip Hop producers. Goldbaby's 60 is version 2 with expanded memory, SCSI and the software upgrade. I love it!

The next couple of pages contain photos of some of the sound sources sampled into the MPC60 for this product.
