SYNTHESIZED DRUMS AND BEATS

Drum Droid

Formats: Ableton Live Pack Ableton Live Presets

Genres : Drums Electro Glitch Techno House

Drum.Droid is a powerful collection of 100% circuit based, synthesized drum and percussion style machines and sequences.

drum.droid provides an outstanding and immediate selection of production-ready, cyborg-esque, drum sounds for all styles of leading-edge music.

By now, you know that here at TrackTeam Audio, we thrive on doing things differently. So, things your not going to find in drum.droid are sounds synthesized from TR-808s, TR-909s, SDSx's, or any other drum machines that are considered "classics", nor will you find any sounds sampled from physical drums or from anything traditionally used to produce drum or percussive type sounds. What you will find is something modern and unique, something crafted with the intention of redefining the classics.

Drum.Droid provides a comprehensive resource for the producer and composer of any sort of contemporary electronic, breakbeat, or dub style music. Each One-Shot sound was impeccably designed using one or more classic and modern synthesis techniques. Most of the Sounds were only able to be realized by combining multiple synthesis techniques, then layering the results.

These innovative techniques are one of the many reasons that drum.droids stand out as a unparalleled collection of multi-synthesized sounds. With all TrackTeam Releases we strive to present tools and sounds that will allow artists and producers to easily create music that attracts immediate attention. Drum.droids is no exception...At its core, drum.droid is comprised of over 500 synthesized and combined drum style samples. These sounds range from deep-diving, phat bass drums and snappy snares to crispy claps, blippy hits and airy effects.

The result is a collection of 40 unique and ultramodern Drum Racks and over 200 Live Clips that instantly distinguish themselves from other drum sample libraries. All Drum Racks use only Simpler and Impulse Instruments as sample containers, so just the standard version of Live 7 is all you need to use this great collection. Also, All Drum Racks come in two flavors, Lite and Full. The Lite version utilizes Minimal Effects for quick and expedient load times, whereas the Full module contains flexible send and master effects with all macros mapped to a choice selection of parameters. Add to this the flexibility of Ableton's Live Clips and modular environment and you have a package that gives so much scope for experimentation that the user is likely to find themselves conjuring up a masterpiece before they know it.

All Live clips are great starting and ending points and show off some great rhythm construction techniques. The best part is all 200+ LiveClips are fully modular, so you can mix and match

components and sequences to make the sounds your own. We think Drum.Droids is the most flexible rhythm based package for Live or any other software environment to date. But you dont have to take our word for it Check out some of the demos and hear for yourself.

Tech Specs:

Over 525 One Shot Samples

40 Synth Based Drum Racks

350 Drum Rack Components

Over 200 Live Clips

Full Macro Mappings

For use with Ableton Live 7+
