Progressive House

Rise is a unique collection of exotic noise special effects to create tension and release in your audio productions and Ableton sets.

One shared concept in modern dance music is the building of tension through the use of differing types of atonal noise.

Rise provides a sound palette of 540 ultra modern noise sfx ,which can be mixed together however you wish, to generate dynamic movement in your audio.

Whizzing, exploding, collapsing and ascending, all can be used collaboratively or individually, creating intricate and motionful crescendos, breaks or transitions with drag and drop simplicity.

Rise is the easy way to form complex noise elements and is guranteed to add new dimensions of energy and movement to your audio productions.

THE RISE LIVE PACK

The live pack gives you complete control of all the Rise elements. As well as the 540 standard clips, the pack contains 560 sample based Fx racks with macro assignments to control the movement and evolution of each individual sound.

Think of the live pack as your personal noise orchestra, you have the ability to shape any of the noise fx into new forms with the racks, or play the velocity/filter sensitivenoise samplers like instruments.

Easy reversing,pitch modulation and "sampled section" playback control mean you can morph each sound in new ways, quickly creating something entirely new from the original part.

A whole batch of multi-mix sampler fx racks is also included for mixing and arranging hundreds of elements on the fly.

Plus a selection of add-on fx racks to hone the sound even further, while retaining full macro management of each part.

If you want a new way to create energetic tension and release in your Ableton sets, Rise has the noise you need.
